High Relative Male Food Insecurity

rank	2014-2016	2015-2017	2016-2018	2017-2019	2018-2020
1	Togo	Togo	Togo	Lebanon	Haiti
2	Malaysia	Nigeria	Uganda	Togo	Togo
3	Kuwait	Uganda	Cameroon	Cameroon	Democratic Republic of the Congo
4	Nigeria	Kuwait	Nigeria	Uganda	Gambia
5	Uganda	Cameroon	Kuwait	Ethiopia	Cameroon
6	Cameroon	Ireland	Ethiopia	Ireland	Uganda

rank	2019-2021	2020-2022	2021-2023	2022-2024	2023-2025
1	Gambia	Malaysia	Democratic Republic of the Congo	Jamaica	Libya
2	Togo	Democratic Republic of the Congo	Algeria	Libya	Jamaica
3	Malaysia	Algeria	Djibouti	Malaysia	Japan
4	Democratic Republic of the Congo	Togo	Malaysia	Singapore	Iran (Islamic Republic of)
5	Cameroon	Djibouti	Togo	Kuwait	Malaysia
6	Haiti	Cameroon	Cameroon	Algeria	United Republic of Tanzania

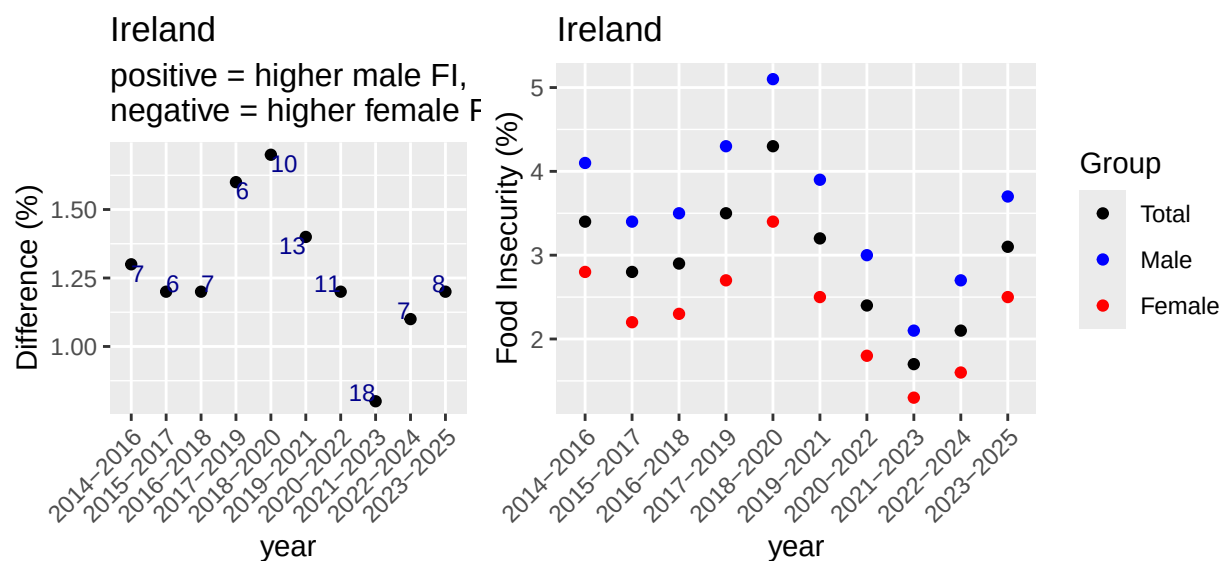

Malaysia

Malaysia has consistently high relative male food insecurity, falling in the top 10 of all countries for all date ranges with available data.

Ireland

Ireland has a lower average country-wide percentage of food insecurity than Malaysia (between 2-5% to Malaysia's 5-8%), but shows a similar trend with male food insecurity being higher than female food insecurity in all year ranges.

High Relative Female Food Insecurity

Data coverage is not consistent across years. This table shows the total number of countries with data available for each year range. Countries with large numbers have high food insecurity for females relative to males.

year	Countries w/ Data Available
2014-2016	98

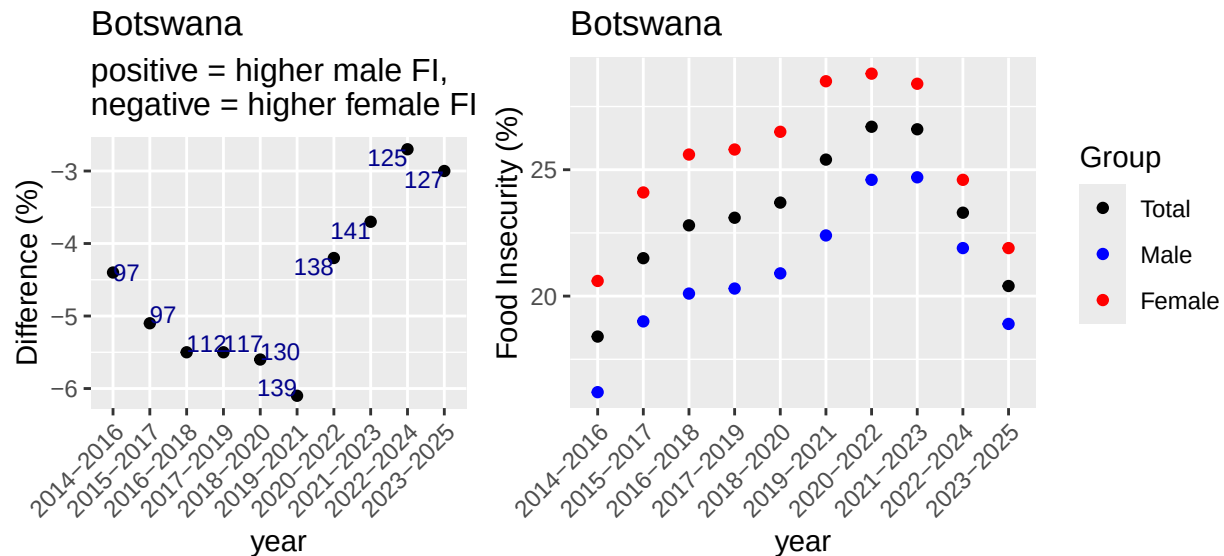

year	Countries w/ Data Available
2015-2017	99
2016-2018	114
2017-2019	120
2018-2020	134
2019-2021	142
2020-2022	145
2021-2023	147
2022-2024	134
2023-2025	134

rank_reversed	2014-2016	2015-2017	2016-2018	2017-2019	2018-2020
1	Jamaica	Jamaica	Jamaica	Libya	Libya
2	Botswana	Libya	Libya	Jamaica	Afghanistan
3	Malawi	Botswana	Botswana	Afghanistan	Argentina
4	Libya	Malawi	Malawi	Botswana	Jamaica
5	Namibia	Dominican Republic	Afghanistan	Argentina	Botswana
6	United Republic of Tanzania	Kenya	Kenya	Malawi	Lao People's Democratic Republic

rank_reversed	2019-2021	2020-2022	2021-2023	2022-2024	2023-2025
1	Libya	Afghanistan	Afghanistan	Afghanistan	Afghanistan
2	Afghanistan	Libya	Argentina	Dominican Republic	Eswatini
3	Jamaica	Argentina	Liberia	Haiti	Pakistan
4	Botswana	Liberia	El Salvador	El Salvador	Dominican Republic
5	Guatemala	Guatemala	Pakistan	Pakistan	Honduras
6	Argentina	El Salvador	Botswana	Liberia	Egypt

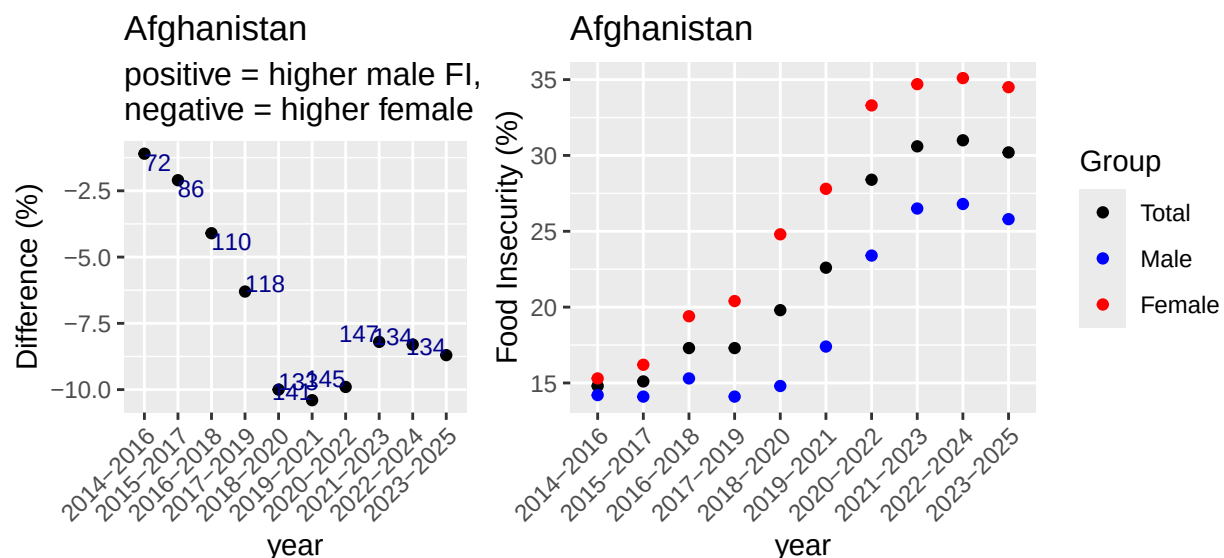

Botswana

Botswana has consistently higher female food insecurity relative to male food insecurity, between 3 and 6% higher.

Afghanistan

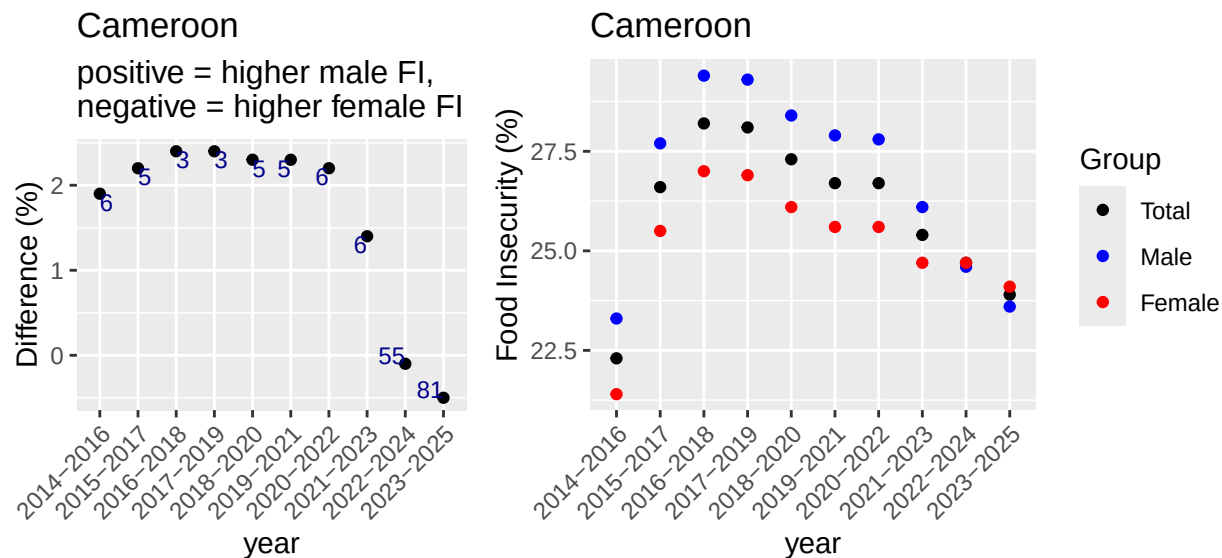

Afghanistan has also had consistently higher female food insecurity than male, with the gap widening over time. Female food insecurity was ~2% higher in 2015-2017, increasing to 10% in 2018-2020 and holding. Of countries with reported data, Afghanistan has had the highest gap of female food insecurity over male for the last four time ranges, and top three for the 3 year ranges before that.

Other Interesting Trends

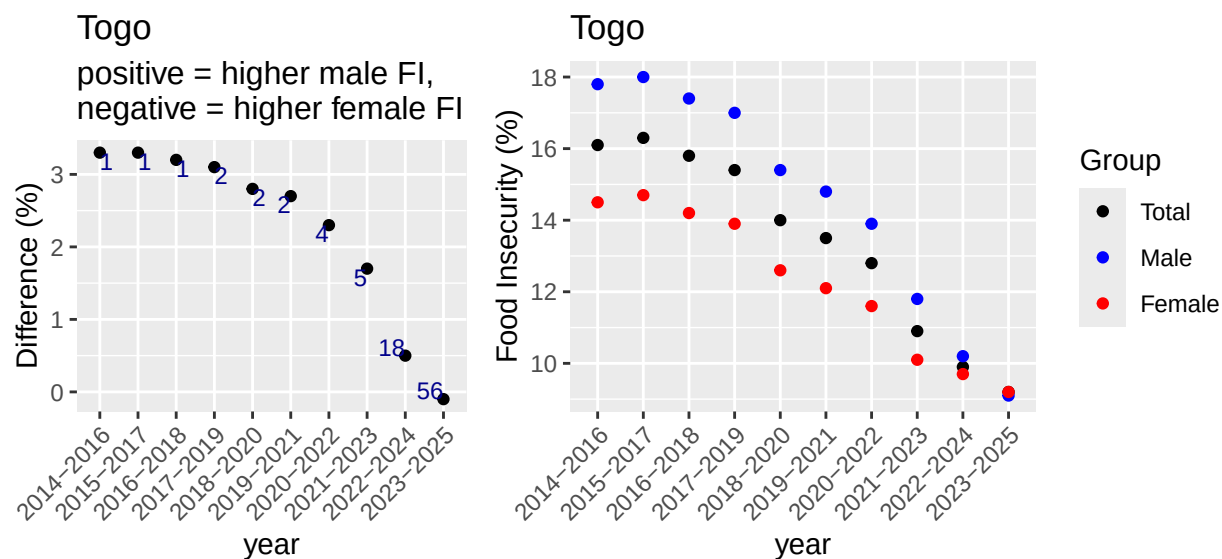

Cameroon

Cameroon was in the top 6, indicating high relative food insecurity for males, from 2014-2016 to 2021-2023 and then in 2022-2024 dropped down to rank 55th. Food insecurity for males and females was approximately equal in 2022-2024 and then slightly higher for females 2023-2025.

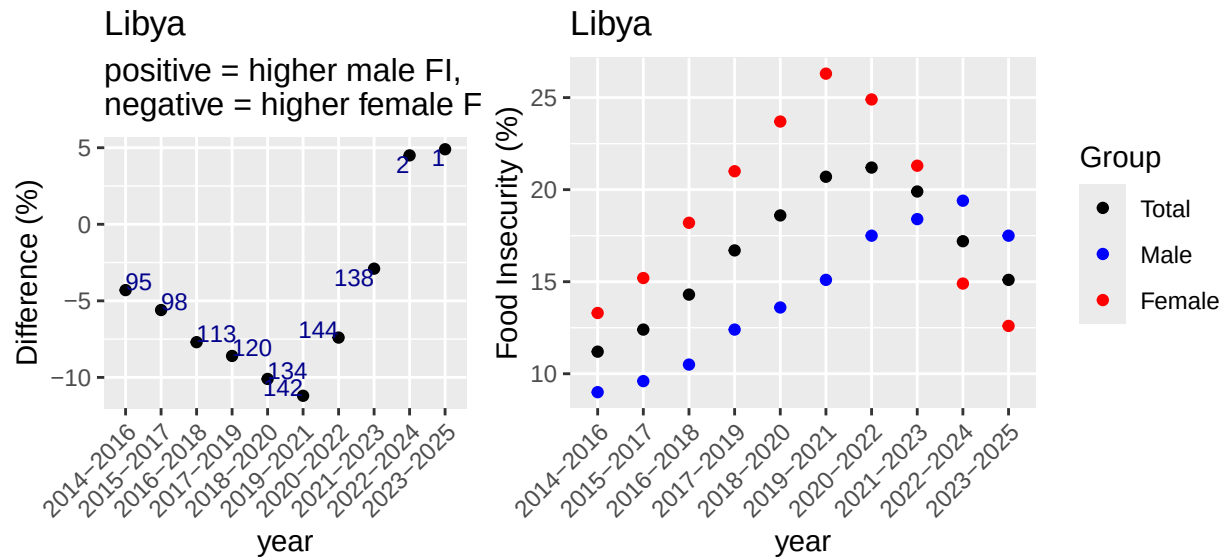

Togo

Togo shows similar pattern to Cameroon, having been the country with the highest relative male food insecurity for three year segments, followed by top 5 for another 5 year segments, and then dropped to 18th in 2022-2024 and 56th in 2023-2025, where male food insecurity and female food insecurity were approximately equal.

Libya

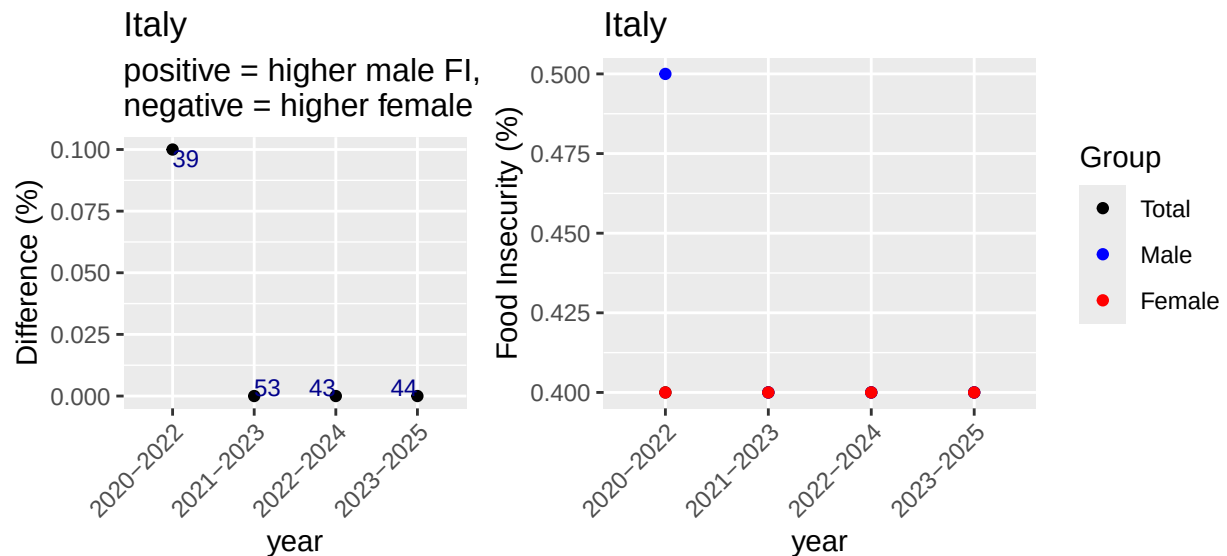

Libya had high relative female food insecurity (between 5 and 12 percent higher than male food insecurity), with the gap increasing between over time. In 2019-2021, Libya had the highest relative female food insecurity of all countries with reported data. This trend then reversed and in 2023-2025 Libya had the highest relative male food insecurity of all countries, with male food insecurity about 5% higher than female food insecurity.

Approximately Equal Food Insecurity

Italy

Italy consistently has almost no food insecurity, reporting less than 0.5% on average for all time ranges for male, female, and total population. (The graph represents less than 0.5% as 0.4 based on an arbitrary assignment to avoid the string “<0.5%” being overwritten as NA when converting to numeric.)

Chad

Chad has high overall food insecurity, between 25 and 40%, but the difference between male and female food insecurity is approximately none.
